

Greetings everyone my name's Febrian from Computer Science 2016, nice to meet you all

Nice to meet you too

What year are you guys from

We are from 2018 and 2019

I'm Zahra, we have HCI assignment, details which we have contacted you by Agatha about your design application GEMAR

This assignment is specifically tasked to review the design of the application

We have prepared a few designs That we have made for you to review According to the assignments

And we also have a few questions about your application design

in other words you can evaluate our work about the design and what insights we have about the design

Plus we need your opinion whether you liked our design or not

And what if I agree

Wait we will show you the video of presentation By screen sharing what we thought about your design application

So we are going to comment is GEMAR application which is specially designed for people who have a hearing disability and also for those who have just learned to read

From each images we can see this these are quite big for screen Maybe it would be better to be minimized

the button sizes are inconsistent, one rather big than the other

I will summarize, the first flaw is the logo at the beginning we think it's too big

It's already at the center, but needs to be minimized

We also not quite sure about the font since its cursive and small, giving an unclear impression maybe it should be changed

For the background choosing already kids friendly so we agreed

Also about the color choosing for the cards, they aren't fit with background

In main feature of the word reading the response from small to big

Overall a good design application aside from the flaws we've told

Now I'm going to give the explanation the reason for cursive is deafs are taught to read

They can't read regular texts it has to be cursive

For me is also why cursive? It's better regular but actually they cant

Could be cursive, but another font next time

In hearing add per syllable use stripes maybe

Oh but there's a difference between per word and per sentence, they understand

You can change the word and color also, whichever you'd like

I think that's all

That's all for the grading yeah

We're going to present the design we have prepared for you to grade, whether it's best to change or not

This one I already changed the icon from orange to blue so it fits the background

Overall the first revised design is only changing the orange-themed to blue-themed

Why only that why not change all?

This is only the first designed the next one going to be completely different from yours

This design is entirely made by me, with the concept from your design

Okay this is more interesting

Same layout, yeah?

Yeah same layout and concept

The logo shouldn't be change since its clients', not mine

My suggestion is taking color background and theme from SPEC logo

Like red, yellow, green, blue yeah

Yeah or use approach to what entertain kids

I also don't like the navigation

This use flashcards yeah, do you agree with using cards?

Agree but make it more interesting

Not like usual or monotone

yeah

Maybe because it's only slide show

As i said, make it more interactive with effects and everything

Is it okay with slide? Or list, tile

The layout isn't good either, right?

I would like to ask a few questions is it okay

How much time do you need to create the app?

From scratch?

One month or so I think

[The rest consist of interviews between our team and the developer]

That's it, guys

Thank you for the time yeah

Thank you very much

Your welcome
